But I'm not sure if my organism/tissue/cell type needs a certain form or forms. Please contact us at src@nccscientifair.org.

This is one of our most problematic areas of communication, so we encourage everyone working with a microorganism/tissue/cell line to contact us BEFORE you start your experiment to make sure you have all of the proper documentation!

My project involves Vertebrate Animals or PHBAs. Do I need Form 1C and/or Form 27?

If your project was performed at a regulated research institution (RRI – e.g., a university lab), you need a Form 1C. In most cases, if you have a Form 1C, you will also need a Form 2 (because you would have been supervised by a Qualified Scientist or their proxy).

If you are performing your work at a location that is not an RRI, your local SRC will determine if your work involves sufficient risk to require a Form 2. If you have any questions about this requirement, please contact us at src@nccscientifair.org.
